22/05	Got a gas peak to the Integra using 5% CO_2. Increased EC T° to 75°C. Ran a 500µg $CaCO_3$ sample. Disappointing small + off peak.	
27/05	Opened the source Comp to 4e-6 mbar. Source tunings for maximum sensitivity give a noisy ratio trace. More 'normal' parameters do not. Tried a batch of dry 5% CO_2 6ml vials. Not in-spec. Tried again with the whacky source tuning and vials filled with a needle. In spec. 0.08 + 0.02	
28/05	Carbonates. Traditionally the spec was for 500µg $CaCO_3$. Tried that first. Passed. 0.03 + 0.08 At 600µA trap - 500µg $CaCO_3$ gives 9nA.	
29/05	Tried DIC. 0.5ml of river water gave ≈5nA. 15ppm TOC calibrant gave 0.8nA.

02/7/20	Peak splitting seems to be related to Water trap. Fitted new H2O traps all OK at first but got worse during run. Found leak on air input line. Auto sample now more better. Contact:	Dr Gilad Antler
Date of Visit:	5th July 2021 (Remote Install Conducted from Crewe) No. of Days: 10
Engineer:	Lee Martin and David Harris

Details of visit:

05 July 2021
Units unboxed and placed on desk. Integra and cetac both powered up and comms achieved. Integra pumping down. Needle heads attached to cetac. Reaction tubes all assembled and fitted to instrument. Gases connected up. Integra passes helium pressure test so furnaces raised to temperature. Machine left pumping overnight.

06 July 2021
Vacuum 1.0e-08 mbar and filament fired successfully. Magnet fitted. Blank high but has come down after a long purge of oxygen lines. Peak shapes good and linearity pass for 13C and 15N. Linearity left running overnight.

07 July 2021
Linearity fail so magnet adjustment and tuning conducted all day on instrument. Linearity pass at the end of the day. Precision left running overnight.

08 July 2021
Precision failed overnight. CO2 results poor at 2.5‰ SD

Revisited tuning and stabilities. Slight retune. Peak shapes and stability looks good.

CO2 2/1 (13C) Peak Shape = OK
CO2 3/1 (18O) Peak shape = OK
N2 Peak Shape = OK

CO2 2/1 stability = OK
N2 Stability = OK

High N2 blank is noted 2nA beam height signal. O2 pressure has dropped down to 4PSI over night. Suspect O2 leak somewhere on system. Internal O2 pressure tests holds OK for 5 min. Customer pressure tested back line plumbing. Holds OK for 5 min. Small leak possible and/or atmosphere is entering the back line plumbing. Customer to run longer pressure tests and leak checks from the O2 cylinder to the instrument.
Also advise to check inside the instrument for possible leaks on the O2 lines.
N2 blanks down to 0.3nA beam height with long purge of O2 line.
Increased O2 purge time mid-sample.

Re-ran N & C Precision Test in Dual mode.
Results very good

15N = 0.048‰ SD
13C = 0.029‰ SD

Client:	Department of Earth and Environmental Sciences Ben-Gurion University of the Negev Israel		
Quotation Number:	12754	Date:	27 Apr 2020
Job Number:	IN1232	Date:	13 May 2020

Ran full N & C Dual linearity batch.

15N = 0.254‰ SD
13C = 0.296‰ SD

Integra2 passes Install setup specs.

Ran another N & C dual precision batch to see if results are effected by external influences during overnight running.

15N = 0.073‰ SD
13C = 0.031‰ SD

Customer is still in the process of producing acid at optimum concentration for µCarbs analysis.
Setup of µCarbs system to be carried over to next week.

13 July 2021

O_2 pressure low after being left to stand for a long period. Customer removed side panel to investigate possible leak on plumbing. Leak found – connections tightened. O_2 pressure holds OK. Customer to run longer pressure test to see if pressure holds.

Customer attempted to fit plumbing to CETAC gas-box for µCarbs system. Customer to use peek tubing until metal 30thou pipe work can be sent out.
Customer has shortage on 1/6 nuts , only 3 available, 4 required. Spare nuts to be sent out to customer.
Unable to plumb in µCarbs system at this time.

Looked at alignment of CETAC sampling positions. Updated software Callisto .exe file to gain control of Head A & B Z-depth.
Explained procedure for fixing positions and checking head A & B injections.
Customer to fully check X and Y sample well positions and save settings.

Damage occurred to needle. New part sent out. Installation to continue when parts received.

16 August 2021

Installation continued after needle arrived with customer.
Needle fitted but still no flow being detected. Investigation indicates issue actually lies in the top union. Blockage removed by fitting with compressed air.
Full carrier flow now being detected at the needle.
Short preliminary DIC batch set off (0.5ml in 5ml white capped vials) and results were encouraging before an unprompted windows reboot stopped the run.
9 sample DIC batch of seawater set off before signing out.
Results to be checked and further customer training to be completed before sign off.

17August 2021

Customer reports good precision results for DIC batch.
Customer reports they are happy to sign off install, with commitment from Sercon to carry out half day training on software Also the customer requires an extra install day for the Sulphur set up (as and when configuration is required by the customer). Sercon agrees with these conditions.

Recommendations:

- Customer to run longer pressure tests and leak checks from the O_2 cylinder to the instrument.
- Also advise to check inside the instrument for possible leaks on the O_2 lines. – (Update) Customer has performed this task. Leak found and fixed.
- Purge O_2 line fully , run “Blank” tests to check background levels.

Faults and Shortages:

- 30thou tubing to connect up µCarbs/CETAC to Intgra2. Customer to set up with peek tubing until replacement can be sent out.
- 1/16th nuts and ferrules for connecting µCarbs/CETAC to Intgra2
- Sulphur column & kit to be sent out to customer.
